

◆ Summary

BATS, the third-largest U.S. equities market center, is actively seeking top-notch software developers with experience in C++, Python, databases or web development.

[Software Developer]

◆ Details

About BATS

Since its founding in June 2005, BATS has positioned itself in the securities industry as a leading market center delivering speed, performance, and innovation to its subscriber base, which is comprised of hundreds of Wall Street's most recognized names. The industry and technology professionals that make up the BATS team are focused on keeping innovation and competition alive in the securities markets. Because our employees and investors come from the industry, we are well positioned to help make the securities markets a better place to do business.

Associate Benefits

BATS Trading offers one of the most exciting places to work in the Kansas City area. Working in the securities industry is exciting, "real-time" fast, always changing, and on the leading edge of technology. We only hire the best and brightest. If you consider yourself in the top ranks in your field of expertise, then you might consider applying to BATS. Join us and work alongside other top notch professionals ... it's always fun being on the "A" team. We have a casual (yet not sloppy) dress code, because we value what our employees can do more than how they dress. Our compensation program, made up of salary, bonus, and equity options, is highly competitive. In addition, the company offers a retirement plan with matching contributions, a group health plan, and life insurance.

Contact BATS

Location

Kansas City, MO

Responsibilities

The Software Engineer's role is to design, develop, deploy and support new system functionality, as well as support and troubleshoot existing programs and applications. This includes configuring, coding, developing, and documenting software specifications throughout the project life cycle using C++. This role must apply principles and techniques of computer science, engineering, mathematical analysis and problem solving. The Software Engineer will also serve as an escalation point for operation problems and handle support calls during high call periods.

Requirements

- Bachelor's Degree in Computer Science or related field, preferred.
- At least 3 years experience developing Linux and Windows real-time applications required.
- Strong experience in object oriented design and programming including full software development life cycle.
- Knowledge of relational database programming and SQL is highly desirable.
- Familiarity with multiple hardware/software development environments, languages and technologies including Linux and MS Windows variants.
- Experience developing industrial strength client/server applications and experience in the financial markets is a plus.
- Priority will be given to resumes that arrive with information detailing real-time and network development in C++.
