

## BATS Modification to Trade Resumption Plans for Security Based Circuit Breakers

---

Based on Member feedback, BATS has decided to change default system functionality such that BATS will wait for the trading resumption message from the listing market to resume trading in a symbol. If the listing market is unable to open the stock within 10 minutes, on a case-by-case basis, BATS may resume trading at 10 minutes or later.

This amendment has been made to the BATS Security Based Circuit Breaker FAQ at:
